

How to Import GarageBand™ Audio into iMovie

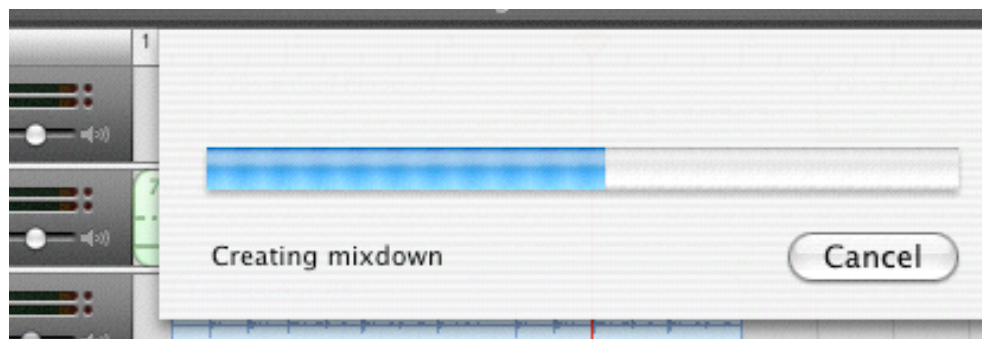

1. Here is your song saved and ready to export:

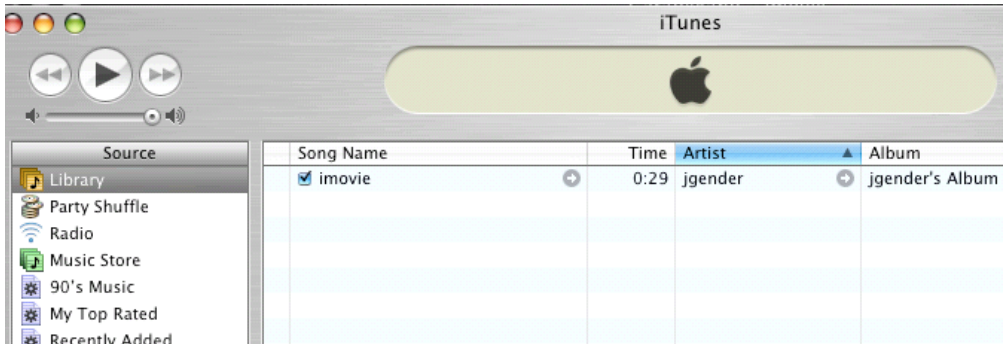

2. Choose File: Export to iTunes:

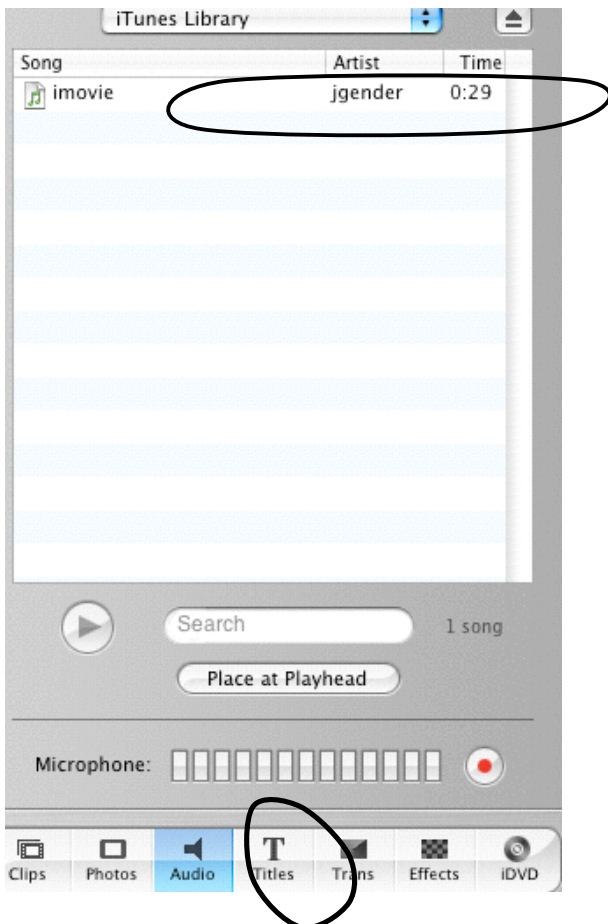

The following dialog box will appear:

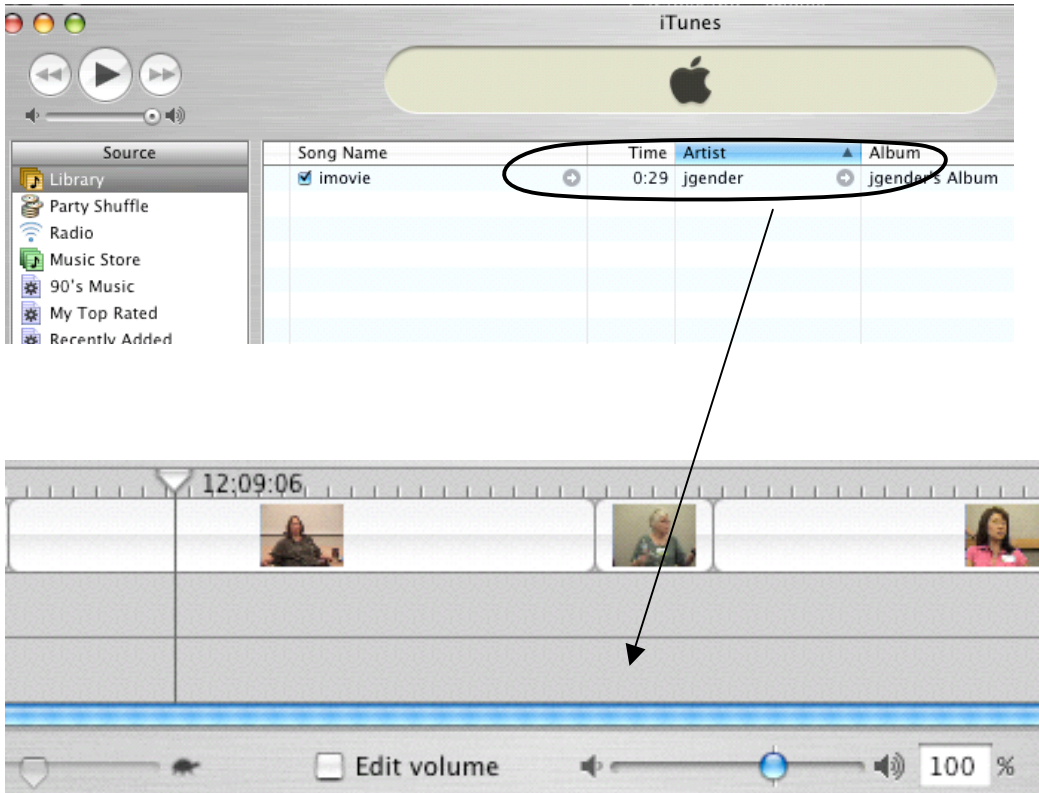

3. In GarageBand will convert the **.band** format to an **.aif** format, which is the correct format for importing into iMovie. iTunes will show your file with the name you have given it:

4. Go to iMovie™. Click on the audio tab, and click on the iTunes™ library. Your song should automatically show up in the dropdown menu.

5. Drag your song from the desired clip to add audio.

Note: You can also place your playhead at the desired location and click **Place Audio at Playhead**.

Extra -- If your audio tab does not register your song you can go to File: Import and select the file from:
